

Pierre has worked with me for several weeks in 2013/2014/2015, at the very early stages of the launch of a new media company. His responsibilities have included collecting market data on various media, drafting specifications for the design of a new editorial website, participating in web design ideas brainstorming sessions.

Pierre has many talents, is resourceful and has been extremely useful. He had shown strong maturity in the grasping of the issues at stake, and great dedication in performing the tasks assigned to him. He is able to present creative ideas and communicate the benefits. He is perfectionist when need be, and implicated as if the project were his. He has proven to be a take-charge person who is able to successfully develop plans and implement them.

In addition, Pierre is very well organised, able to successfully complete multiple tasks with favourable results despite deadline pressure, diligent in his paperwork, pleasant and easily reachable.

Pierre has real potential, and I would highly recommend him to any future employer. He is a team player and would make a great asset to any organisation.

Sophie Bernard

Cofounder, Magtobe SAS

Pierre joined BBOXX for a 6-month internship during the summer of 2016, during this time he was working on a project to research the emerging trends in battery technologies. He worked to produce a business case for change and design hardware and software prototypes for testing lifetimes of the most viable options.

During the six months he was working with a wide range of people across the business from the Engineering team who design the products to the operation team who are based in East Africa managing sales. Pierre was comfortable working with these teams to understand their needs and bring these together into one project plan which he proceed to execute in a timely manner.

On completion of the project Pierre shared the knowledge gained with the team to enhance BBOXX's knowledge of modern battery systems

and their potential impact on the business model. BBOXX is continuing to long the lifetime tests that were design by Pierre and hope to launch a product variant with the chosen lithium-ion battery pack in 2017. Overall, the BBOXX team we're very pleased with Pierre's ability to self-drive a project and achieve valuable results.

Ashley Grealish

Engineering Manager, BBOXX Ltd

Pierre has attended the Fine Arts class at the International High School (Lycée International) in Saint-Germain-en-Laye (France) for 2 years (2011-2013). This represented for him three additional hours of class every week, over and above the large amounts of work that his bilingual education (French & English) required.

He was a very serious, diligent and brilliant student (grade point average 19/20), developing his projects in a remarkable way. His projects were always very well thought out, and of rare breadth and depth for students at his level. He systematically complemented his art work with exemplary written argumentations which I still use as reference for my current students.

Pierre has shown the ability to open up to a number of different techniques: drawing, painting, photography, installation, volume... with very accomplished crafting qualities. His thinking went beyond the boundaries the arts class, dwelling on topics of philosophical, societal, and political nature, which were often fascinating.

He has also always been a leading, active member in the group, willing to share his projects and allow his classmates to benefit from his research and his ideas with a very positive attitude. His motivation to pursue his career path in the arts remains intact to date and he has been able to cleverly build this journey.

I wholeheartedly recommend him for this course, in which I am convinced he will know how to participate and contribute, in an active, intelligent and very inventive way.

Marie-Thérèse Latuner-El Mouhibb

Professor & Doctor in Fine Arts
